submissions, and (3) include anonymized versions of those papers in the supple-

Fig. 1. The website of ACCV 2022 is at https://www.accv2022.org. If images are copied from some source then provide the reference. Follow copyright rules as they apply. A caption ends with a full stop.

1.4 Supplemental Material

Authors may optionally upload supplemental material. Typically, this material might include videos of results that cannot be included in the main paper, anonymized related submissions to other conferences and journals, and appendices or technical reports containing extended proofs and mathematical derivations that are not essential for understanding of the paper. Note that the contents of the supplemental material should be referred to appropriately in the paper and that reviewers are not obliged to look at it.

All supplemental material must be zipped into a single file or in the form of a single PDF file. There is a 100 MB limit on the size of this file. The deadline for supplemental material is a week after the main paper deadline.

1.5 Line Numbering

All lines should be numbered, as in this example document. This makes reviewing more efficient, because reviewers can refer to a line on a page. If you are preparing a document using a non-LaTeX document preparation system, please arrange for an equivalent line numbering. Note that accepted papers need to be submitted as a LaTeX document in the style as defined in this document.

1.6 Mathematics

Please number all of your sections and displayed equations. Again, this makes reviewing more efficient, because reviewers can refer to a line on a page. Also, it is

CONFIDENTIAL REVIEW COPY. DO NOT DISTRIBUTE.

ACCV-22 submission ID ***

important for readers to be able to refer to any particular equation. Just because you did not refer to it in the text does not mean some future reader might not need to refer to it. It is cumbersome to have to use circumlocutions like "the equation second from the top of page 3 column 1." (Note that the line numbering will not be present in the final copy, so is not an alternative to equation numbers). Some authors might benefit from reading Mermin's description of how to write mathematics: http://www.pamitc.org/documents/mermin.pdf.

2 Blind Review

Many authors misunderstand the concept of anonymizing for blind review. Blind review does not mean that one must remove citations to one's own work—in fact it is often impossible to review a paper unless the previous citations are known and available.

Blind review means that you do not use the words "my" or "our" when citing previous work. That is all. (But see below for techreports).

Saying "this builds on the work of Lucy Smith [1]" does not say that you are Lucy Smith, it says that you are building on her work. If you are Smith and Jones, do not say "as we show in [7]," say "as Smith and Jones show in [7]" and at the end of the paper, include Reference 7 as you would any other cited work.

An example of a bad paper:

An Analysis of the Frobnicatable Foo Filter

In this paper we present a performance analysis of our previous paper [1], and show it to be inferior to all previously known methods. Why the previous paper was accepted without this analysis is beyond me.

[1] Removed for blind review

An example of an excellent paper:

An Analysis of the Frobnicatable Foo Filter

In this paper we present a performance analysis of the paper of Smith and Jones [1], and show it to be inferior to all previously known methods. Why the previous paper was accepted without this analysis is beyond me.

[1] Smith, L., Jones, C.: The frobnicatable foo filter, a fundamental contribution to human knowledge. Nature **381** (2005) 1–213

If you are making a submission to another conference at the same time, which covers similar or overlapping material, you may need to refer to that submission in order to explain the differences, just as you would if you had previously published related work. In such cases, include the anonymized parallel submission [1] as additional material and cite it as

[1] Authors: The frobnicatable foo filter, ACCV 2022 Submission ID 512, Supplied as additional material accv22-512-frfofi.pdf.

Finally, you may feel you need to tell the reader that more details can be found elsewhere, and refer them to a technical report. For conference submissions, the paper must stand on its own, and not *require* the reviewer to go to a techreport for further details. Thus, you may say in the body of the paper "further details may be found in [2]." Then submit the anonymized techreport as additional material. Again, you may not assume the reviewers will read this material.

Sometimes your paper is about a problem which you tested using a tool which is widely known to be restricted to a single institution. For example, let us say it is 1969, you have solved a key problem on the Apollo lander, and you believe that the ACCV audience would like to hear about your solution. The work is a development of your celebrated 1968 paper entitled "Zero-g frobnication: How being the only people in the world with access to the Apollo lander source code makes us a wow at parties," by Zeus.

You can handle this paper like any other. Do not write "We show how to improve our previous work [Anonymous, 1968]. This time we tested the algorithm on a lunar lander [name of lander removed for blind review]." That would be silly, and would immediately identify the authors. Instead write the following:

We describe a system for zero-g frobnication. This system is new because it handles the following cases: A, B. Previous systems [Zeus et al. 1968] did not handle case B properly. Ours handles it by including a foo term in the bar integral.

The proposed system was integrated with the Apollo lunar lander, and went all the way to the moon.

As you can see, the above text follows standard scientific convention, reads better than the first version, and does not explicitly name you as the authors. A reviewer might think it likely that the new paper was written by Zeus, but cannot make any decision based on that guess. He or she would have to be sure that no other authors could have been contracted to solve problem B.

FAQ: Are acknowledgements OK? – Answer: No. Please *omit acknowledgements* in your review copy; they can go in the final copy.

3 Manuscript Preparation

This is an edited version of Springer LNCS instructions adapted for ACCV 2022 full paper paper submission.

You will have to use \LaTeX for the preparation of your final (accepted) camera-ready manuscript together with the corresponding Springer class file llncs.cls.

We would like to stress that the class/style files and the template should not be manipulated and that the guidelines regarding font sizes and format should be adhered to. This is to ensure that the end product is as homogeneous as possible.

CONFIDENTIAL REVIEW COPY. DO NOT DISTRIBUTE.

ACCV-22 submission ID ***

3.1 Printing Area

The printing area is $122 \text{ mm} \times 193 \text{ mm}$. The text should be justified to occupy the full line width, so that the right margin is not ragged, with words hyphenated as appropriate. Please fill pages so that the length of the text is no less than 180 mm.

3.2 Layout, Typeface, Font Sizes, and Numbering

Use 10-point type for the name(s) of the author(s) and 9-point type for the address(es) and the abstract. For the main text, use 10-point type and single-line spacing. We recommend using Computer Modern Roman (CM) fonts, Times, or one of the similar typefaces widely used in photo-typesetting. (In these typefaces the letters have serifs, *i.e.*, short endstrokes at the head and the foot of letters.) Italic type may be used to emphasize words in running text.

Bold type and underlining should be avoided.

With these sizes, the interline distance should be set so that some 45 lines occur on a full-text page.

Headings. Headings should be capitalised (*i.e.*, nouns, verbs, and all other words except articles, prepositions, and conjunctions should be set with an initial capital) and should, with the exception of the title, be aligned to the left. Words joined by a hyphen are subject to a special rule. If the first word can stand alone, the second word should be capitalised. The font sizes are given in Table 1. (Note that vertical lines are not common table components anymore.)

Table 1. Font sizes of headings. Table captions should always be positioned *above* the tables. A table caption ends with a full stop.

Heading level	Example	Font size and style
Title (centered) 1st-level heading	Lecture Notes 1 Introduction	14 point, bold 12 point, bold
2nd-level heading	2.1 Printing Area	10 point, bold
3rd-level heading	Headings. Text follows	10 point, bold
4th-level heading	Remark. Text follows	10 point, italic

Here are some examples of headings: "Criteria to Disprove Context-Freeness of Collage Languages," "On Correcting the Intrusion of Tracing Non-deterministic Programs by Software," "A User-Friendly and Extendable Data Distribution System," "Multi-flip Networks: Parallelizing GenSAT," "Self-determinations of Man."

Lemmas, Propositions, and Theorems. The numbers accorded to lemmas, propositions, theorems, and so forth should appear in consecutive order, starting with the number one, and not, for example, with the number eleven.

3.3 Figures and Photographs

Produce your figures electronically and integrate them into your text file. We recommend using package graphicx or the style files psfig or epsf.

Check that in line drawings, lines are not interrupted and have constant width. Grids and details within the figures must be clearly readable and may not be written one on top of the other. Line drawings should have a resolution of at least 800 dpi (preferably 1200 dpi). For digital halftones 300 dpi is usually sufficient. Color is possible in figures, but note that figures in the printed proceedings will be in halftones only.

The lettering in figures should have a height of 2 mm (10-point type). Figure 1 contains lettering of different sizes; in such a case make sure that the smallest letters have a height of 2 mm. Figures should be scaled up or down accordingly. Do not use any absolute coordinates in figures.

Figures should be numbered and should have a caption which should always be positioned *under* the figures, in contrast to the caption belonging to a table, which should always appear *above* the table. Please center the captions between the margins and set them in 9-point type (Figs. 1 and 2 show examples). The distance between text and figure should be about 8 mm, the distance between figure and caption about 5 mm.

If possible define figures as floating objects, or use location parameters "t" or "b" for "top" or "bottom." Avoid using the location parameter "h" for "here." If you have to insert a page break before a figure, ensure that the previous page is completely filled.

3.4 Formulas

Displayed equations or formulas are centered and set on a separate line (with an extra line or halfline space above and below). Displayed expressions should be numbered for reference. The numbers should be consecutive within each section or within the contribution, with numbers enclosed in parentheses and set on the right margin. For example,

$$\psi(u) = \int_{0}^{T} \left[\frac{1}{2} \left(\Lambda_o^{-1} u, u \right) + N^*(-u) \right] dt . \tag{1}$$

Please punctuate a displayed equation in the same way as ordinary text but with a small space before the end punctuation.

3.5 Program Code

Program listings or program commands in the text are normally set in typewriter font, for example, CMTT10 or Courier.

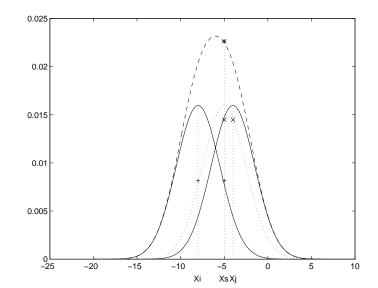

Fig. 2. One kernel at x_s (dotted kernel) or two kernels at x_i and x_j (left and right) lead to the same summed estimate at x_s . This shows a figure consisting of different types of lines. Elements of the figure described in the caption should be set in Italics and in parentheses, as shown in this sample caption.
